GOLDCODE EVENTS

Website owner's guide

Standard operating procedures for running goldcodeevents.com · Version 1 · October 2026 · Prepared by codespecs.net

1. What you control

The website has one private area, the **manager page**, at **goldcodeevents.com/admin**. From there you manage everything about your nights.

YOU CAN CHANGE	YOU CANNOT CHANGE — ASK YOUR DEVELOPER
Event title, short name, series	Homepage headlines and brand lines
The story paragraphs for each night	The About page
Date, start and end time	Footer, contact details, social links
Venue, address, city, age note	Colours, fonts, layout
Humanitix ticket link and ticket status	Logo
Up to ten photographs per night, with captions and order	
Whether a night is Published or a Draft	
Whether a night is Upcoming or Past	

> Everything you save on the manager page is live on the public site within a few seconds. There is no separate “publish website” step.

2. Signing in

1. Go to **goldcodeevents.com/admin**.
2. Enter the username and password you were given separately. Never put them in an email, a group chat or this document.
3. Click **Sign in**.

When you are finished, click **Sign out** at the top right, especially on a shared or borrowed computer.

If you forget the password, contact your developer. Do not create extra accounts; the site is built for one manager account.

3. Reading the manager page

At the top you see three counters: **Published**, **Drafts** and **Photographs**.

Below is the list of nights. Each row shows the night's title, its date and venue line, and three badges:

- **Published** or **Draft** — whether the public can see it.
- **Upcoming** or **Past** — which section of the site it appears in.
- **n/10 photos** — how many photographs it has.

Click a row to open it. Click it again to close it.

4. Procedures

4.1 Announce a new night

1. Click **New night**.
2. Fill in **Title** (the full name, e.g. *Africa to Aotearoa: The Link Up – Summer Edition*) and **Short name** (how you say it casually, e.g. *The Link Up – Summer Edition*).
3. Optionally paste the first version of the **Story**.
4. Click **Create draft**. The night is created as a **Draft** — the public cannot see it yet.
5. Open the new night in the list and complete the rest of the form (see 4.2).
6. When it is ready, set **Visibility** to **Published** and click **Save night**.

A published upcoming night appears on the Events page. The soonest upcoming night also becomes the headline event on the homepage and controls the **Get tickets** button in the top bar.

4.2 Fill in or edit a night

Open the night and work down the form.

FIELD	WHAT TO PUT IN IT
Title	Required. Full event name as it should appear in headings.
Short name	Required. Shorter name used in lists and photo groups.
Series	The series it belongs to, e.g. Africa to Aotearoa. Leave empty for a one-off.
Place line	The one-line summary under the title on the Events page. Use the pattern `30 May 2026 | Cassette Nine, Auckland`. The bar `|` separates the date from the venue. For a night with no fixed date yet, write just the venue or city.
Story	The paragraphs visitors read. Press Enter twice between paragraphs. Two or three paragraphs is right; the first one is also used as the opening line on the homepage.
Search description	One plain sentence describing the night. Google shows this under the link. Keep it under about 160 characters.
Starts / Ends	Date and time in Auckland time. These power the "Doors 9:30 pm–3:00 am" line and the big date on the Events page.
This night has passed	Tick this after the night has happened (see 4.5).
Venue / City / Address	Venue name, city, and street address.
Humanitix link	Paste the full event link from Humanitix (starts with `https://events.humanitix.com/`). Leave empty and the Get tickets button is hidden for that night.

FIELD	WHAT TO PUT IN IT
Age note	e.g. R18 — valid photo ID required.
Ticket status	Choose one: Coming soon, Tickets available, Early bird nearly gone, Sold out, Postponed, Cancelled. Shown next to the ticket button.
Visibility	Published = live. Draft = hidden from the public.

Click **Save night**. "Saved." appears under the button when it has worked. If something is wrong, a red message explains what to fix. After saving a published night, click **View the public page** to check how it looks.

4.3 Put tickets on sale

1. Create the event on Humanitix and copy its public link.
2. Open the night, paste the link into **Humanitix link**.
3. Set **Ticket status** to **Tickets available**.
4. Click **Save night**.

The button appears on that night's page, on the Events page, and — if it is the soonest upcoming night — in the top bar of every page.

Sold out? Change **Ticket status** to **Sold out** and save. Leave the link in place so people can still reach the Humanitix page for waitlists.

4.4 Postpone or cancel

- Set **Ticket status** to **Postponed** or **Cancelled** and save. The night stays visible with that label.
- When a new date is confirmed, update **Starts**, **Ends** and **Place line**, set status back to **Tickets available**, and save.
- To hide a night completely, set **Visibility** to **Draft**. Nothing is deleted; you can publish it again later.

4.5 After the night: mark it past and add photographs

Do this within a week of the event so the site keeps looking current.

1. Open the night.
2. Tick **This night has passed**.
3. Change the first paragraph of the **Story** from future tense to past tense if needed ("returns" → "brought").
4. Click **Save night**. The night moves from Upcoming to **Past nights** on the Events page, and the next upcoming night takes over the homepage and the ticket button automatically.
5. Scroll to **Photographs** and upload up to ten (see 4.6).

Once a past night has at least one photograph it appears on the Gallery page and, if it is the most recent past night with photos, in the homepage photo block.

4.6 Photographs

Choosing photos

- Up to **ten** per night. The eleventh is refused — remove one first.
- Pick photos with lots of people, hands up, the room full. Crowd shots work better than DJ close-ups.

- Use JPG or PNG. Aim for 1–3 MB each; phones and cameras usually export within this range. Very large files (over 10 MB) upload slowly.
- Landscape (wider than tall) suits the layout best. One or two portrait shots are fine.
- Make sure you have the photographer's permission to use the images.

Adding a photo

1. Open the night and scroll to **Photographs (n/10)**.
2. Under **Add a photograph**, choose the file.
3. Optionally type a **Caption** (a few words: "The floor at midnight").
4. Click **Upload**. "Photograph added." confirms it.

Ordering. The first photograph is the largest on the public page and is the one used on the Events page strip and the homepage. Put your strongest shot first. Use **Move earlier** and **Move later** to change the order.

Captions. Edit the caption under any photo and click **Save caption**. Captions are optional and show in the full-screen viewer.

Removing. Click **Remove** under the photo. This is immediate and cannot be undone — keep your originals.

5. Monthly check (10 minutes)

- Open goldcodeevents.com on your phone. Does the homepage show the right next event? Does **Get tickets** open the right Humanitix page?
- Open the manager page. Any night that has happened but still shows **Upcoming**? Tick **This night has passed** and save.
- Any past night with 0 photos? Add some.
- Any **Draft** that should be live, or a stale draft to tidy?
- Spot-check a past night's page and the Gallery page.

6. If something goes wrong

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
"Sign in as the Event Manager."	Your session expired.	Sign out and sign in again.
"This account cannot edit events."	You are signed in with an account that is not the manager.	Sign out and use the manager username.
"A night needs a title and a name."	Title or Short name is empty.	Fill both and save again.
"This night already has ten photographs."	The ten-photo limit.	Remove one, then upload.
"Choose a photograph."	You clicked Upload without picking a file.	Pick a file first.

WHAT YOU SEE	WHAT IT MEANS	WHAT TO DO
Change saved but the public page looks old	Your browser cached the page.	Refresh the page (pull down on mobile, Ctrl+F5 on desktop).
Page will not load at all	Hosting or database issue.	Contact your developer. Nothing you did on the manager page can take the site down.

7. Good habits

- **Use the manager page only.** Do not ask anyone to "edit the code" for event text; everything about a night is in the form.
- **Draft first, publish when complete.** Visitors should never see a night with no date or venue.
- **One source of truth for dates.** If the date changes, change it here the same day you change it on Humanitix and Instagram.
- **Keep the password private.** Change it if you suspect anyone else has it; ask your developer how.
- **Keep photo originals** on your own drive or cloud. The website is a display, not a backup.

8. Contact

For anything outside the manager page — design changes, the About page, new features, access problems — contact your developer at **codespecs.net**.
